

CAPABILITY STATEMENT

FOR GREAT  
EXPECTATIONS

## LOCAL FAMILY BUSINESS

Since 1975, we've set the standard for **EXCEPTIONAL CUSTOMER SERVICE** in South Australia's electrical services industry.

### TECHNICAL EXPERTISE AND EXPERIENCE

Customers choose to partner with us because of our deep knowledge of electrical systems and reliability to deliver complex projects on time and on budget.

### FLEXIBILITY TO ADAPT

We custom design, build and maintain efficient power and lighting systems based on your needs and building requirements.

### OUR VALUES

#### Safety

Our commitment to occupational health and welfare of employees, clients and the public is absolute.

#### Reliable

We empower our people to be responsive and service-orientated, accountable to customers, and self-managed.

#### Perceptive

We understand our clients, their business and the assets we maintain for them.

#### Partnerships

We value long-term partnerships with our clients and intermediaries.

#### Highly Skilled

The standard of our technical capabilities is how we measure ourselves.

#### Adaptive

We take the initiative and embrace new, evolving technologies with rapid understanding and versatility.

#### Integrity

It underpins everything we do with a culture of mutual respect for all.

#### Sustainability

We aim to be a leader in energy efficiency and sustainability within the electrical contracting sector.

## DESIGN

Speak to us **EARLY** to get the most **COST-EFFECTIVE** electrical design for your project. We design power and distribution systems for construction, fit-outs and refurbishments.

### DESIGN SERVICES

- Value Management Through Efficient Infrastructure Design
- 3D BIM
- AutoCAD and Revit Design Software
- New Construction, Fit-outs and Refurbishment Projects
- Renewable Energy Systems

### OUR DESIGN PROCESS

#### Stage 1 – Design Review

Optimise infrastructure design to maximise value and performance.

#### Stage 3 – Construction Documentation

Develop and issue construction drawings, critical work plans, interface schedules and BIM.

#### Stage 2 – Detailed Design

Build 3D model and collaborate with construction delivery team.

#### Stage 4 – Handover Documentation

Provide As-Built, Operations & Maintenance manuals, and technical support.

### KEY PROJECTS

Adelaide Botanic High School – Stages 1 & 2

[VIEW PROJECT >](#)

Australian Bragg Centre

[VIEW PROJECT >](#)

SkyCity Adelaide – Hotel & Casino

[VIEW PROJECT >](#)

## CONSTRUCTION

**OUR TEAM WORK WITH YOU** to design and install electrical infrastructure that meets your budget and schedule.

### INSTALLATION SERVICES

#### Power & Lighting Systems

- Switchboards and Distribution Systems
- Advanced Lighting Control Systems
- Diesel Power Generators
- HV Substations and Transformers
- Solar and Wind Power Generation

#### Data Communications & Security

- Integrated Communications, MATV, AV and Public Address Systems
- Access Control, CCTV and Security Systems
- Structured Data and Cabling

### OUR CONSTRUCTION PROCESS

#### Stage 1 – Estimating

Evaluate best options and propose fit for purpose solution.

#### Stage 2 – Design Review

Ensure buildability and energy efficiency requirements are met.

#### Stage 3 – Project Plan

Develop detailed design, resource and safety plans.

#### Stage 4 – Project Delivery

Co-ordinate interfaces with delivery partners and subcontractors.

#### Stage 5 – Commissioning & Handover

Provide certifications and operations manuals.

### KEY PROJECTS

Eastwood Private Hospital

## SERVICE & MAINTENANCE

We make sure your electrical assets are **COMPLIANT** and **OPERATIONAL** by providing preventative maintenance and 24/7 emergency response from our CBD location.

### MAINTENANCE SERVICES

- 24/7 Emergency Response
- Fit-outs and Refurbishments
- Switchboards and RCDs
- Renewable Energy Systems
- Diesel Power Generators
- Thermographic Surveys
- Power Factor Correction Units
- Exit and Emergency Lighting
- Access Control, CCTV and Security Systems
- Lighting Control Systems
- Testing and Tag of Electrical Equipment
- Design, Testing and Reporting

### OUR MAINTENANCE PROCESS

#### Stage 1 – Need Identification

Understand your objectives and current / future energy consumption requirements.

#### Stage 2 – Asset Identification

Create asset register and scope of maintenance works.

#### Stage 3 – Preventative Maintenance Plan

Detailed schedule of planned maintenance works.

#### Stage 4 – Delivery

Maintain assets, schedule reactive works, and provide 24/7 emergency response services.

#### Stage 5 – Reporting

Ensure compliance with Australian Standards and enhance positive impacts on your Environmental, Social and Governance practices.
